

Orchid

Orchidaceae

Generated: 02-Dec-2025

Orchids are a diverse and elegant family of tropical and subtropical flowering plants known for their intricate blooms and long-lasting flowers. Belonging to the family Orchidaceae, they are distributed across tropical regions worldwide. Orchids have thick, often waxy petals arranged in complex symmetrical patterns, with colors ranging from white and pink to purple, yellow, and green. Many species produce a pleasant fragrance. Orchids thrive in well-drained soil, humid environments, and indirect sunlight. They are highly valued for ornamental gardening, floral displays, and as collector's plants due to their exotic appeal and delicate beauty.
