

Lavender

Lavandula angustifolia

Generated: 02-Dec-2025

Lavender is a fragrant, perennial herbaceous plant known for its soothing aroma, purple flowers, and culinary and medicinal uses. Belonging to the genus *Lavandula*, it is native to the Mediterranean region. Lavender features narrow, gray-green leaves and erect stems topped with dense spikes of small, tubular flowers in shades of purple and violet. The plant thrives in full sunlight and well-drained, slightly alkaline soil. Lavender is cultivated for essential oils, perfumes, aromatherapy, dried arrangements, and ornamental gardens, symbolizing calmness, purity, and serenity.
