Dahlia pinnata

Generated: 02-Dec-2025

Dahlia is a vibrant perennial flowering plant celebrated for its wide range of shapes, colors, and intricate petal arrangements. Belonging to the genus *Dahlia*, it is native to Mexico and Central America. Dahlias produce bushy, tuberous stems with pinnate leaves and flowers that may bloom singly or in clusters, ranging from soft pastels to bold, bright hues. They are widely grown in gardens, floral competitions, and decorative arrangements. Dahlias thrive in well-drained soil under full sunlight, requiring regular watering and deadheading for continuous flowering.
