

Snowdrop

Galanthus nivalis

Generated: 02-Dec-2025

Snowdrop is a delicate, early-blooming perennial plant known for signaling the arrival of spring. Belonging to the genus *Galanthus*, it is native to Europe and the Middle East. The plant features slender green leaves and small, nodding white flowers shaped like bells. Snowdrops grow from bulbs and are often found in woodlands, meadows, and gardens. They prefer moist, well-drained soil under partial sunlight and are cherished for their simplicity, elegance, and ability to thrive in cooler climates, providing a charming early-season display.
