

Lily

Lilium

Generated: 02-Dec-2025

The Lily is a perennial flowering plant recognized for its large, showy flowers and graceful form. Belonging to the genus *Lilium*, it is native to temperate regions of the Northern Hemisphere. Lilies have tall, erect stems, lance-shaped leaves, and trumpet- or bowl-shaped blooms in a variety of colors, including white, pink, orange, and yellow. They are popular in ornamental gardening, floral arrangements, and religious or cultural ceremonies. Lilies prefer well-drained soil, full sunlight, and careful watering to encourage abundant flowering.
